

Litter Box 101

Cats can be finicky creatures! If your litter boxes are not up to standard, your cat will surely find a way to let you know. Here are some useful tips to help you set up your cats' litter boxes successfully with Odour Buster™.

LOCATION, LOCATION, LOCATION!

- Place litter boxes in quiet, or less-trafficked, areas of the house where your cat will not be unpleasantly surprised during elimination. While cats do not require the same privacy humans like, they do appreciate feeling safe while doing their business.
- In a multi-level home, it is recommended to provide one box per level.

HOW MANY BOXES DO I NEED?

- The recommended number of litter boxes is: one per cat plus one. If you have two cats, you should have at least three litter boxes.
- Cats territorially identify the house. Space your litter boxes out in convenient areas around the home. *Do not place all the boxes side by side.*

WHAT TYPE OF BOX SHOULD I BUY?

- Choose a box that best fits the needs of your cat. For example, choose a large box for a large cat, and a low-sided box for an older cat that might have difficulty climbing into a box with high sides.
- Cats generally prefer a box from which they can have a good view of their environment and any impending dangers. For example, an ambush by other cats in a multi-cat home. If using a covered box, place the box so that the opening gives onto the room and the cat can access and exit the box easily.

HOW MUCH ODOUR BUSTER™ LITTER SHOULD BE POURED IN THE BOX?

- The recommended litter depth is 10cm.
- After scooping, top up the box to maintain the recommended depth.

HOW OFTEN SHOULD I SCOOP AND CLEAN THE BOX?

- No one enjoys a dirty bathroom. Although Odour Buster™ can eliminate odours for up to one week without scooping, your cat will appreciate you for scooping her litter on a regular basis.
- We recommend that you completely clean your cat's litter box monthly and wash it with mild soap. Because cats scratch when they use the litter, urine can become trapped in the plastic where odour-causing bacteria can develop. Replace the box when it starts to retain odour even after cleaning or if it becomes excessively scratched.

MONITOR YOUR CAT.

- *Cats let us know something is wrong by the way they behave. Consult your vet to rule out any medical issue your cat might be having if she eliminates outside of the litter box.*
