Coating of all Particles	YES	NO

99.9%

DUST FREE

Odour Buster™ Original is completely dedusted for your cat's safety and the comfort of your entire household. This is accomplished by constantly controlling the litter's humidity levels during production and passing it through eight dedusting stations prior to packaging.

FOUL-ODOUR FREE

The Odour Buster™ recipe, made from eight exclusive odour and bacteria eliminating ingredients, was originally created to control odours in the toughest agricultural settings.

If Odour Buster™ can eliminate odours in pig pens and chicken coops, imagine how well it can work for your cat's litter box!

DAILY-MAINTENANCE FREE

With Odour Buster™ Original your cat's litter will remain foul-odour free even if you don't scoop every day.

PERFUME AND CHEMICAL FREE

Odour Buster™ Original eliminates odours without the need for any added chemicals or perfumes.

ALL NATURAL

Odour Buster™ Original is made from premium-grade, natural ingredients only and is safe for your cat, family, and the environment.

If you are not 100% satisfied* with Odour Buster™ Original, we'll refund or replace the product.

*Guarantee is limited to the amount paid for the product.

ODOUR BUSTER™ ORIGINAL AND THE ENVIRONMENT

Bentonite Clay is an absorbent, natural clay composed of aged volcanic ash found beneath topsoil. Bentonite is used in several products including: crayons, medicinal emulsions and ointments, toothpaste, water softener systems, and, of course, our cat litter!

Odour Buster™ Original is made using superior quality clay sourced exclusively from responsible mining operations in Wyoming, USA. This state has a strong commitment towards the protection of its environment. Wyoming laws strictly regulate mining and the land reclamation process to ensure that mined sites are returned to their original state.

RESPONSIBLE MINING IS:

- ensuring that the site can be mined responsibly
- saving the topsoil and returning it to the site after mining has ceased
- reclaiming the site and planting native vegetation
- monitoring the land to ensure that vegetation and wildlife can thrive
- **returning the mined sites to their original state or better!**
